WORK EXPERIENCE

Successful Projects

- **ComponentLand.com** (300+ Tailwindcss HTML Components)
  - Also made a little tool that turns drawings into tailwind components (only layout), this is what helped me make 300+ components in a span of around 2 months.
- Made a **chrome extension** that converts any part of a website into a tailwind component
- **OutliersYoutube** (find breakout videos on youtube and learn from them)
- **SocialScreenshotGenerator** (turn tweets into beautiful screenshots for reposting on instagram)
- **Qalam form submission automation** in python
- **FB Friends Monitor** in Rust (Creates a timeline of onlineness of your friends so you can see their fb usage patterns)
- **Boolean Expression to Circuit Maker** (Turns simple boolean expressions into Proteus like circuits, was intended for cheating on DLD assignments 😅 but they got exponentially harder, so much so that I couldn't keep up with upgrading my tool)

Tried Projects

- YOLO fine-tuned Captcha Detector for NUST NET results scraping (so I can have a bigger picture, and pin point outlier students)
  - Also created a scraper to generate captcha dataset to be labelled.
  - Also created a little tool for high speed labelling to maximize productivity.
- Reddit + LLM Augmented Content Ideation Tool for Social Media Marketing
- Viral Youtube Shorts Generation at Scale
- Watermark removal from video footage
- Debundling webpack transpiled javascript back into source

SKILLS

→ HTML/CSS/JS
→ Python, PHP
→ React, Svelte
→ Tailwind, Bootstrap
→ Sveltekit
→ Databases (SQL)
→ Networking basics
→ Responsive Web Design
→ Wordpress Plugin Dev
→ Wordpress Theme Dev
→ Time management

COURSE

National University of Sciences & Technology

Software Engineering

2023-2027
